Final Assessment Assignment

The final assessment will require that each student team up with another member of the class to complete the assignment. Each group will consist of 2-3 students. Each group will research medical journals and medical literature relating to the cardiovascular system and the respiratory system. Each group will select two (2) case studies or medical journal articles for each system and create a glossary of twenty-five (25) medical terms that they find within the case study or article.

Each group will write a 2-3 paragraph reflection on each article that demonstrates in laymen's terms what the article or the case study was about.

The final assessment will require that each group present a 2 -3-paragraph conclusion in their final document that describes the overall impact of understanding medical terminology on a basic level and how the knowledge gained will change each student or their way of life.

One (1) extra credit point will be given for each additional 5 words placed in the respective glossaries up to 20 additional terms, for a possible total of 4 points of extra credit for each glossary.

Each group will be required to provide the title of the Article or case study used for each glossary. The student will also need to provide a link to the document.

The Final Assessment will be a minimum of 6 pages with a title page and a reference page. The title page needs to include all of names of the students in each group, date, course name and document title (Final Assessment). A minimum of 5 references are required with 4 needing to be from journals or medical case studies. Each group may use Google Scholar and Ohio link to find journal articles. Electronic journals or articles will be accepted from an appropriate source.

Refer to the Final Assessment Rubric for evaluation criteria and requirements.

Total Points: 200
